

# Turing Way Readiness Snapshot — KIDS25-Team11

This is a Turing Way-aligned readiness snapshot, not an official certification. The Turing Way is public best-practice guidance, not a certification authority or institutional policy. No official body has reviewed or endorsed this repository. Scores reflect only what is observable in the public repository at the reviewed commit; they are not legal, ethical, security, or institutional approval.

## Review metadata

- **Repository:** [stjude-biohackathon/KIDS25-Team11](https://github.com/stjude-biohackathon/KIDS25-Team11)
- **Reviewed commit:** [5bda7ab4a71331a4ec0126a865fd8a0c8c557d28](https://github.com/stjude-biohackathon/KIDS25-Team11/commit/5bda7ab4a71331a4ec0126a865fd8a0c8c557d28) (main, "Update README.md")
- **Review date:** 2026-09-18
- **Scope:** Public repository contents only — the R Shiny application (HartwellV20/app.R, server.R, ui.R), top-level R scripts, README.md, LICENSE, and repository/version-control metadata. No private data, credentials, or non-public information were accessed.
- **Confidence:** Medium — the repository is small (8 commits, ~9 files) and was fully enumerated, so observations are reliable; however, no maintainer interviews or issue/PR history beyond the default branch were reviewed.

**Total score: 17 / 100**

## Ten-criterion score table

| # | Criterion                      | Score (0–10) | Evidence (repository)                                                                                                                                                                                               | Turing Way guidance cited                |
|---|--------------------------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|
| 1 | Project purpose and scope      | 4            | <a href="#">README.md</a> states the app's purpose (a Shared Resource Form Generator for sequencing orders) and its two service options, but documents no scope boundary, target-user detail, or known limitations. | <a href="#">Project Design</a>           |
| 2 | Version control and provenance | 2            | Commit history at <a href="#">/commits</a> shows 8 commits, most titled generically "Add files via upload"; no tags or releases exist.                                                                              | <a href="#">Version Control</a>          |
| 3 | Open collaboration             | 0            | <a href="#">Repository root</a> has no CONTRIBUTING.md, CODE_OF_CONDUCT.md, or .github/ISSUE_TEMPLATE; no contribution or review path is documented.                                                                | <a href="#">Code of Conduct</a>          |
| 4 | Reproducible environments      | 1            | <a href="#">HartwellV20/app.R</a> is an R Shiny app with no DESCRIPTION, renv.lock, or other dependency manifest, and <a href="#">README.md</a> gives no setup/installation instructions.                           | <a href="#">Reproducible Research</a>    |
| 5 | Data and workflow provenance   | 1            | <a href="#">CAB_empty_dataframes.R</a> and                                                                                                                                                                          | <a href="#">Research Data Management</a> |

| #  | Criterion                                     | Score (0–10)    | Evidence (repository)                                                                                                                                                                                          | Turing Way guidance cited               |
|----|-----------------------------------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
|    |                                               |                 | Sequencingt empty dataframes.R build and manipulate order dataframes, with no documentation of data sources, schemas, or expected input/output formats.                                                        |                                         |
| 6  | Testing and validation                        | 0               | No tests/ directory or files matching test* exist anywhere in the repository tree; no validation criteria are documented.                                                                                      | <a href="#">Testing</a>                 |
| 7  | Automation and continuous integration         | 0               | No .github/ workflows directory or other CI configuration exists in the repository tree; no automated checks run on changes.                                                                                   | <a href="#">Continuous Integration</a>  |
| 8  | Documentation and usability                   | 3               | README.md is a short two-paragraph description with no usage walkthrough; the repository also contains an unprofessionally named artifact, The Broken Html Code : ( , indicating limited documentation polish. | <a href="#">Project Design Overview</a> |
| 9  | Licensing, attribution, and responsible reuse | 6               | An MIT LICENSE file is present, attributing copyright to St. Jude Children's Research Hospital BioHackathon (2025); however, there is no CITATION.cff or citation/attribution guidance for reuse.              | <a href="#">License</a>                 |
| 10 | Ethics, accessibility, and sustainability     | 0               | Neither README.md nor any other file discusses ethical/privacy considerations for sequencing-order data, accessibility, or a maintenance/archival plan.                                                        | <a href="#">Legal Disclaimer</a>        |
|    | <b>Total</b>                                  | <b>17 / 100</b> |                                                                                                                                                                                                                |                                         |

## Observed repository facts (checks performed)

- Repository contents at the reviewed commit: README.md , LICENSE , server.R , ui.R , HartwellV20/app.R , CAB empty dataframes.R , Sequencingt empty dataframes.R , St Jude Website Test 3.html , and The Broken Html Code : ( .
- git log at the reviewed commit shows 8 commits from 5 authors, spanning 2025-08-24 to 2025-10-01; 5 of 8 commits are titled "Add files via upload" (GitHub web-upload default message) and git tag returns no tags.
- No .github/ directory (no CI workflows, no issue/PR templates) exists in the repository.
- No CONTRIBUTING.md , CODE\_OF\_CONDUCT.md , CITATION.cff , DESCRIPTION , or renv.lock file exists in the repository.
- No tests/ directory or test files exist in the repository.

## Recommendations (ranked by impact)

1. **Add automated tests and a CI workflow** (criteria 6–7, currently 0/10 each). Even a minimal `.github/workflows/` job that runs `R CMD check` or loads `app.R/server.R/ui.R` to catch syntax errors would substantially raise reproducibility confidence. See The Turing Way's [Testing](#) and [CI](#) guidance.
2. **Declare and pin dependencies** (criterion 4, 1/10). Add an `R DESCRIPTION` file or `renv.lock` and README setup instructions so others can reproduce the Shiny app's environment. See [Reproducible Research](#).
3. **Add open-collaboration documentation** (criterion 3, 0/10): a `CONTRIBUTING.md` and `CODE_OF_CONDUCT.md` clarify how others can contribute and what conduct is expected. See [Code of Conduct](#).
4. **Document data provenance** (criterion 5, 1/10): describe the source, schema, and expected shape of the dataframes the R scripts construct. See [Research Data Management](#).
5. **Improve commit hygiene and documentation** (criteria 2 and 8): use descriptive commit messages and tag releases; expand the README with setup/usage instructions and remove or rename ad hoc artifacts such as `The Broken Html Code : (`.
6. **Add ethics/accessibility/sustainability notes** (criterion 10, 0/10): state whether the form handles any sensitive data, and note a maintenance plan. See [Legal Disclaimer](#).

## Limitations of this snapshot

- This snapshot reflects only the public repository contents at the pinned commit above; it does not assess private issues, discussions, forks, security posture, or institutional/legal compliance.
- Scores are based on presence/absence of observable artifacts and their content, not on runtime testing of the Shiny application.
- This is **not** an official Turing Way certification, and The Turing Way project does not issue certifications. Treat this as guidance-aligned self-assessment input only.
