

Turing Way-Aligned Readiness Snapshot

This is not an official certification. The Turing Way is a community-maintained handbook of best practices for reproducible, ethical, and collaborative research. This document is a transparent, evidence-based readiness snapshot scored against a ten-criterion rubric inspired by Turing Way guidance. It carries no legal, institutional, or official certifying authority, and a passing or high score does not constitute compliance with any funder, journal, or institutional policy.

- **Repository reviewed:** stjude-biohackathon/KIDS25-Team15 ("Jude-E")
- **Review date:** 2026-09-18
- **Commit reviewed:** c943fe51bae7e4f6457149200ebcaba0e8a29416 (branch main)
- **Scope:** Full public repository as checked out (frontend judee-web/, backend backend/, notebooks/, docker-compose.yml, root docs). Only accessible, non-sensitive repository documentation, configuration, and version-control history were inspected. No runtime execution, external service credentials, or private data were accessed.
- **Confidence:** Medium. Evidence is directly observed from the repository tree and Git history at the pinned commit above; the assessment reflects repository-visible practices only and cannot verify undocumented internal processes (e.g., informal code review conducted outside GitHub, or ethics discussions that took place off-repository).

Method

- Retrieved Turing Way guidance via the required evidence tools (get_rag_status, get_turing_way_review_evidence, get_turing_way_evidence_packets) before scoring.
- 2. Inspected the repository tree, README files, LICENSE, dependency manifests (backend/requirements.txt, judee-web/package.json), docker-compose.yml, .gitignore, and git log/git tag output at the pinned commit.
- 3. Scored each of the ten criteria below from 0 (no reliable evidence) to 10 (clear, repeatable, and maintained practice), using only observations that could be directly verified in the repository.

Ten-Criterion Score Table

#	Criterion	Score (0–10)	Key Observed Evidence	Turing Way Guidance Cited
1	Project purpose and scope	6	README.md clearly states Jude-E's purpose (an AI assistant helping patients navigate St. Jude facility/resources) and implied audience, but does not state scope boundaries, known limitations, or out-of-scope use.	Project Design

#	Criterion	Score (0–10)	Key Observed Evidence	Turing Way Guidance Cited
2	Version control and provenance	5	git log shows ~40 commits with descriptive messages from 6 distinct authors (Aug–Oct 2025), but git tag returns no tags, there are no releases/CHANGELOG, and no branch-protection evidence is visible in the repo.	Version Control
3	Open collaboration	1	No CONTRIBUTING.md, CODE_OF_CONDUCT.md, .github/ISSUE_TEMPLATE, or maintainership statement exists anywhere in the repository tree.	Open Source Guide
4	Reproducible environments	5	backend/requirements.txt pins some packages exactly (e.g. grpcio==1.67.1) but leaves others unpinned (fastapi, chromadb, langchain); backend/Dockerfile fixes a python:3.11 base image. judee-web/package.json uses caret-ranged npm versions. No documented supported-version matrix or .env.example exists.	Project Design – Methods
5	Data and workflow provenance	1	backend/scrapped_data/ contains 7 CSV files (e.g. scraped_output_metadata_new.csv, Events_SJ_patients.csv) with no README, data dictionary, or provenance/source notes describing how or when they were collected.	Research Data Management Checklist
6	Testing and validation	0	No test files, test directories, or documented validation/fixture instructions exist anywhere in the repository.	Testing Guidance
7	Automation and continuous integration	0	There is no .github/workflows directory or any other CI configuration file in the repository.	CI Practices
8	Documentation and usability	5	README.md gives step-by-step Ollama, npm, and docker-compose setup instructions; judee-web/README.md adds brief run commands. Neither includes usage examples, screenshots, troubleshooting guidance, or a stated limitations section.	Code Documentation
9	Licensing, attribution, and responsible reuse	5	Root LICENSE file contains the full MIT License text with a 2025 St. Jude Children's Research Hospital BioHackathon copyright notice, but there is no CITATION.cff or citation guidance, and no third-party attribution notes for scraped data or bundled assets.	Open Source Guide; Citable Software
10	Ethics, accessibility, and sustainability	0	No file or README section addresses ethics/privacy review, patient data or PHI handling, accessibility, or a maintenance/archival plan, despite the project being a patient-facing assistant for a pediatric hospital.	Stakeholder Personas
Total		28 / 100		

Observed Repository Facts (with GitHub evidence links)

- README states project purpose: <https://github.com/stjude-biohackathon/KIDS25-Team15/blob/c943fe51bae7e4f6457149200ebcaba0e8a29416/README.md>
- Git history (6 authors, no tags): <https://github.com/stjude-biohackathon/KIDS25-Team15/commits/c943fe51bae7e4f6457149200ebcaba0e8a29416>
- No CONTRIBUTING/CODE_OF_CONDUCT/issue templates: <https://github.com/stjude-biohackathon/KIDS25-Team15/tree/c943fe51bae7e4f6457149200ebcaba0e8a29416>
- Backend dependency pinning: <https://github.com/stjude-biohackathon/KIDS25-Team15/blob/c943fe51bae7e4f6457149200ebcaba0e8a29416/backend/requirements.txt>
- Undocumented scraped CSV datasets: https://github.com/stjude-biohackathon/KIDS25-Team15/tree/c943fe51bae7e4f6457149200ebcaba0e8a29416/backend/scrapped_data

- No test/CI files:
<https://github.com/stjude-biohackathon/KIDS25-Team15/tree/c943fe51bae7e4f6457149200ebcaba0e8a29416>
- README setup steps: <https://github.com/stjude-biohackathon/KIDS25-Team15/blob/c943fe51bae7e4f6457149200ebcaba0e8a29416/README.md>
- MIT LICENSE present, no citation file:
<https://github.com/stjude-biohackathon/KIDS25-Team15/blob/c943fe51bae7e4f6457149200ebcaba0e8a29416/LICENSE>
- No ethics/accessibility/sustainability documentation:
<https://github.com/stjude-biohackathon/KIDS25-Team15/tree/c943fe51bae7e4f6457149200ebcaba0e8a29416>

Recommendations (prioritized)

- **Add automated tests and CI** (criteria 6–7): introduce a minimal test suite (e.g. pytest for the FastAPI backend, a Vitest/Jest suite for judee-web) and a GitHub Actions workflow that runs them on every push and pull request.
- 2. **Document the scrapped datasets** (criterion 5): add a README.md (or data dictionary) inside backend/scrapped_data/ describing the source, collection date, scope, and schema of each CSV file.
- 3. **Add contribution and community-health files** (criterion 3): add CONTRIBUTING.md and CODE_OF_CONDUCT.md, and consider .github/ISSUE_TEMPLATE files.
- 4. **Address ethics, privacy, and sustainability** (criterion 10): since this is a patient-facing assistant for a pediatric hospital, document any ethical review, PHI/privacy handling safeguards, accessibility considerations, and a plan for ongoing maintenance or archival once the hackathon concludes.
- 5. **Add a CITATION.cff** (criterion 9) and pin all backend dependency versions in requirements.txt (criterion 4) for full reproducibility.
- 6. **Tag releases** and add a CHANGELOG.md (criterion 2) to improve provenance and traceability of shipped versions.

Limitations

- This snapshot reflects only what is observable in the repository tree and Git metadata at the pinned commit; it cannot verify practices that exist outside the repository (e.g., private design discussions, informal ethics review, or manual QA not recorded in version control).
- Turing Way evidence was retrieved from a Retrieval-Augmented Generation (RAG) index over *The Turing Way* handbook (dataset turing-way, reported relevance score 89.0, 9 sources) and is cited to the pinned upstream commit bb3f7abb56a40cd92a654fb51e4ec91f429cca2a of

the-turing-way/the-turing-way.

- No files other than this report and its PDF rendering were modified, installed, committed, or pushed as part of this review.

Total score: 28 / 100 — This is a Turing Way-aligned readiness snapshot, not an official Turing Way certification.
