

Turing Way-Aligned Readiness Snapshot

Repository: stjude-biohackathon/KIDS25-Team16 **Reviewed commit:** acb3caa5b3aa6a6116ed0a46650bf4b8d189b089 (branch main) **Review date:** 2026-09-18 **Reviewer:** GitHub Copilot CLI, using the turing-way-certified skill **Confidence:** High (the entire repository content was directly inspected; it consists of exactly two files)

This is a Turing Way-aligned readiness snapshot, not an official certification. The Turing Way is public best-practice guidance published by The Alan Turing Institute community; it is not a certifying body, and no score below implies endorsement, approval, or compliance with any institutional or legal requirement. Scores reflect only what is directly observable in this repository at the reviewed commit.

Scope

This snapshot inspects the full public repository as it exists at the reviewed commit: README.md , LICENSE , and the Git history. No other files, directories, or branches exist to review. No dependencies were installed, no files other than these two reports were created, and nothing was committed or pushed as part of this review.

Ten-Criterion Score Table

Each criterion is scored 0–10 based only on evidence observed directly in the repository. Total is out of 100.

#	Criterion	Score (0–10)	Observed Evidence	Turing Way Guidance
1	Project purpose and scope	0	README.md contains only the single line # KIDS25-Team16 , with no description, research question, intended users, or limitations.	Project Design
2		1		Version Control

#	Criterion	Score (0–10)	Observed Evidence	Turing Way Guidance
	Version control and provenance		<code>git log</code> shows exactly one commit (Initial commit); <code>git tag</code> returns no tags or releases. A Git repository exists, but there is no meaningful history or provenance trail yet.	
3	Open collaboration	0	No <code>CONTRIBUTING.md</code> , <code>CODE_OF_CONDUCT.md</code> , issue templates, or PR templates exist anywhere in the repository.	Contributing
4	Reproducible environments	0	The repository root contains only <code>LICENSE</code> and <code>README.md</code> ; there are no dependency manifests, environment files, or setup instructions.	Reproducibility Overview / Barriers
5	Data and workflow provenance	0	A full repository listing shows no data files, scripts, notebooks, or workflow definitions of any kind.	Research Data Management Checklist
6	Testing and validation	0	No test directories, test files, or documented validation/testing instructions exist anywhere in the repository.	Testing Guidance
7	Automation and continuous integration	0	No <code>.github/workflows</code> directory or any other CI configuration file exists in the repository.	Continuous Integration Practices
8	Documentation and usability	0	<code>README.md</code> is 15 bytes and contains only the title heading; there is no usage information, examples, or onboarding path.	Code Documentation — Project Level
9	Licensing, attribution, and responsible reuse	8	<code>LICENSE</code> contains the complete, unmodified MIT License text with a clear copyright notice for "St. Jude Children's Research Hospital BioHackathon (2025)." This is a clear, standard, machine-readable license. Points withheld because there is no <code>CITATION.cff</code> or third-party attribution/ citation guidance.	License
10	Ethics, accessibility, and sustainability	0	No ethics statement, accessibility statement, or maintenance/sustainability/archival plan is present anywhere in the repository.	Accessibility
Total		9 / 100		

Checks Performed

- Listed and read every file in the repository at the reviewed commit (`README.md` , `LICENSE` ; two files total).
- Inspected `git log` , `git tag` , and the git remote configuration for provenance and history depth.

- Checked for the presence (and absence) of `.github/workflows`, `CONTRIBUTING.md`, `CODE_OF_CONDUCT.md`, issue/PR templates, test directories, dependency manifests, and data/workflow files.
- Queried public repository metadata (`gh repo view`) for description, license, issues, and pull request counts.
- Retrieved and cited relevant Turing Way guidance chapters for each criterion via the required MyGPT/Turing Way evidence tools before scoring.

Recommendations (Prioritized)

1. **Add a real README** — describe the project's purpose, research question, intended users, and known limitations (Criterion 1, 8). See [Project Design](#) and [Code Documentation — Project Level](#).
2. **Add** `CONTRIBUTING.md` **and** `CODE_OF_CONDUCT.md` to enable open collaboration and set review expectations (Criterion 3). See [Contributing](#).
3. **Commit actual project code/data/workflows with descriptive, incremental commit messages** rather than a single placeholder commit, and document data sources and workflow steps as they are added (Criterion 2, 5). See [Version Control](#) and [RDM Checklist](#).
4. **Declare a reproducible environment** (e.g. `requirements.txt`, `environment.yml`, or a container definition) once code is added (Criterion 4). See [Reproducibility Barriers](#).
5. **Add automated tests and a CI workflow** (e.g. GitHub Actions) so checks run and are visible to contributors as code is added (Criterion 6, 7). See [Testing Guidance](#) and [CI Practices](#).
6. **Add a** `CITATION.cff` and any relevant ethics, accessibility, or sustainability/maintenance statements (Criterion 9, 10). See [License](#) and [Accessibility](#).

Limitations

- The repository at the reviewed commit is a minimal, effectively empty scaffold (one commit, two files). This snapshot cannot assess criteria that depend on content that does not yet exist (code, data, tests, CI, or documentation beyond the README).
- No private, credential-bearing, or PHI-related material was reviewed or referenced, as none is present in this public repository.
- This snapshot reflects only the state of the repository at the commit listed above; it will not automatically update as the repository changes.
- Turing Way chapter citations above are pinned to a specific commit (`bb3f7abb56a40cd92a654fb51e4ec91f429cca2a`) of `the-turing-way/the-turing-way` and were retrieved through the required evidence-retrieval tools before scoring.

Final Score

Total: 9 / 100

This is a transparent readiness snapshot only. It is **not** an official Turing Way certification, and no certifying authority has reviewed or endorsed this repository.
