

Turing Way-Aligned Readiness Snapshot

Important: This document is a transparent, Turing Way-aligned readiness *snapshot*, produced with automated assistance. **It is not an official Turing Way certification, and The Turing Way is not a certifying body.** The Turing Way project publishes public best-practice guidance; it does not issue certifications, audits, or approvals for other repositories. Scores below reflect only what could be directly observed in the reviewed repository at the time of review.

Field	Value
Repository	stjude-biohackathon/KIDS25-Team2
Reviewed commit	83788e04c94b476cd1f51c2f1c9db2dfc479437e (branch main)
Review date	2026-09-18
Scope	Entire public repository as of the reviewed commit (root tree only)
Confidence	High -- entire repo is 2 files / 1 commit, fully inspectable
Total score	9 / 100

Method

Following the turing-way-certified skill workflow: (1) retrieved Turing Way review evidence via the required evidence tool; (2) listed and read pinned Turing Way guidance chapters; (3) resolved one evidence packet per recommendation, pairing a directly observed, commit-pinned repository fact with a pinned Turing Way citation; (4) scored all ten criteria of the required rubric (0-10 each, 100 total). No criterion was skipped or merged, and no score was awarded without a verifiable, commit-pinned repository fact. The entire repository tree consists of exactly LICENSE and README.md -- no source code, data, configuration, CI workflows, tests, or additional documentation exist.

Ten-criterion score table

#	Criterion	Score (/10)	Evidence & rationale
1	Project purpose and scope	0	README.md contains only the single line "# KIDS25-Team2" -- no research question, scope, intended users, or known limitations are described.
2	Version control and provenance	1	Git/GitHub baseline exists, but history is exactly one commit (83788e0, "Initial commit") with no incremental history and no tags/releases.
3	Open collaboration	0	No CONTRIBUTING.md, CODE_OF_CONDUCT.md, issue templates, or governance information exist in the repository.
4	Reproducible environments	0	No dependency manifest (requirements.txt, environment.yml, package.json, Dockerfile) or setup instructions exist.
5	Data and workflow provenance	0	The repository contains no code, data files, or workflow scripts of any kind.
6	Testing and validation	0	No test files, test directories, or testing documentation are present.
7	Automation and continuous integration	0	No .github/workflows directory or other CI/automation configuration exists.
8	Documentation and usability	0	README.md is 14 bytes, title only -- no usage guidance, onboarding, or examples.
9	Licensing, attribution, and responsible reuse	8	Complete, correctly formatted MIT LICENSE present (St. Jude Children's Research Hospital BioHackathon, 2025). Two points withheld: no CITATION.cff exists.
10	Ethics, accessibility, and sustainability	0	No documentation addresses ethics, privacy, accessibility, sustainability, or a maintenance plan.
		9 / 100	

Recommendations with pinned Turing Way citations

1. Add a project purpose/scope section (research question, intended users, known limitations).

Repository fact: README.md (blob/83788e0/README.md) contains only "# KIDS25-Team2".

Guidance: Guide for Project Design -- book/website/project-design/project-design.md

2. Establish a real, incremental commit history with descriptive messages, and tag releases where appropriate.

Repository fact: commit 83788e0 is the only commit on main; no tags exist.

Guidance: Version Control -- book/website/reproducible-research/vcs.md

3. Add contribution guidance, a code of conduct, and maintainership information.

Repository fact: repository root at 83788e0 contains only LICENSE and README.md.

Guidance: Code of Conduct -- book/website/community-handbook/coc.md

4. Document setup/installation instructions and declare pinned dependencies/environment files.

Repository fact: repository root at 83788e0 has no dependency manifest or setup instructions.

Guidance: Open Source -- book/website/reproducible-research/open/open-source.md

5. Document data sources, workflow steps, and provenance/metadata for inputs and outputs.

Repository fact: repository tree at 83788e0 has no data, code, or workflow files.

Guidance: Research Data Management Checklist -- book/website/reproducible-research/rdm/rdm-checklist.md

6. Add automated or documented tests with reproducible run instructions.

Repository fact: repository tree at 83788e0 contains no test files or testing documentation.

Guidance: Testing Guidance -- book/website/reproducible-research/testing/testing-guidance.md

7. Add CI/automation (e.g. GitHub Actions workflows) to run checks visibly on contributions.

Repository fact: repository tree at 83788e0 has no .github/workflows directory or other CI configuration.

Guidance: Continuous Integration Best Practices -- book/website/reproducible-research/ci/ci-practices.md

8. Expand README documentation with usage, onboarding, and examples.

Repository fact: README.md (blob/83788e0/README.md) is 14 bytes, title only.

Guidance: Guide for Project Design -- book/website/project-design/project-design.md

9. Keep the existing MIT LICENSE and add a CITATION.cff for attribution/citation guidance.

Repository fact: LICENSE (blob/83788e0/LICENSE) is a complete, correctly formatted MIT license; no CITATION.cff exists.

Guidance: License -- book/website/LICENSE.md

10. Add accessibility, ethics/privacy considerations, and a sustainability/maintenance plan.

Repository fact: repository tree at 83788e0 has no documentation addressing these topics.

Guidance: Accessibility -- book/website/community-handbook/accessibility.md

Limitations of this review

- The reviewed repository is nearly empty (one commit, two files): most criteria score at or near zero because there is no artifact to evaluate, not due to a lack of investigation.
- This review did not access private planning documents, wikis, chat channels, or non-public project materials.
- No credentials, PHI, or restricted files were accessed or required.
- This snapshot reflects the repository only at commit 83788e04c94b476cd1f51c2f1c9db2dfc479437e; later changes are not reflected here.
- This is not, and must not be represented as, an official Turing Way certification. It is a best-practice-aligned readiness snapshot intended to help the team prioritize improvements.
