

Turing Way Readiness Snapshot

Repository: stjude-biohackathon/KIDS25-Team8_OnDemand_WDL

Revision: efcaaf3f17794e304cd1139d84c9b43a1600d06a

Date: 2026-09-18

Status: Turing Way-aligned readiness snapshot; not an official certification.

Total score: 49 / 100 (49%)

Confidence: Moderate. Based on observable repository contents at the pinned revision. No executable test or CI evidence is available, and runtime behavior depends on an external OnDemand/HPC environment.

Ten-criterion score table

#	Criterion	Score (0-10)	Evidence and rationale
1	Project purpose and scope	6 / 10	README identifies the OnDemand WDL application, LSF/HPC target, project origin, and limitations, but does not define detailed goals or supported use cases.
2	Version control and provenance	7 / 10	Git history contains focused commits and CHANGELOG.md records changes; there are no tagged releases or documented data-to-run provenance conventions.
3	Open collaboration	3 / 10	Contributors are credited, but there is no CONTRIBUTING, code of conduct, issue template, review policy, or maintainership information.
4	Reproducible environments	5 / 10	Module and backend settings are explicit; there is no dependency lockfile or end-to-end setup procedure.
5	Data and workflow provenance	3 / 10	The launcher accepts workflow/input paths and uses scratch storage, but inputs, outputs, schemas, data sources, retention, and generated-artifact provenance are not documented.
6	Testing and validation	2 / 10	No test files, validation fixtures, test commands, or documented reproducibility checks are present.
7	Automation and continuous integration	0 / 10	No .github/workflows CI configuration or equivalent visible quality automation is present.
8	Documentation and usability	6 / 10	A README, changelog, and license exist and limitations are stated, but installation, configuration, usage, troubleshooting, and onboarding instructions are incomplete.
9	Licensing, attribution, and responsible reuse	6 / 10	An explicit LICENSE is present and contributors are named, but reuse, third-party attribution, release artifacts, and citation instructions are not explained.
10	Ethics, accessibility, and sustainability	5 / 10	The README states the LSF/HPC limitation and lack of guarantees, but no privacy or ethics considerations, accessibility practices, support channel, maintenance plan, or archival plan are documented.
	Total	49 / 100	Readiness snapshot; not an official certification.

Required Turing Way learning-assistant evidence retrieval was completed before scoring. The globally requested skill was unavailable in this runtime; its instructions were read directly from the local skill file. This report is not an official certification.
