

Turing Way-Aligned Readiness Snapshot

This is not an official certification. The Turing Way is public best-practice guidance, not a certifying authority. This document is a transparent, evidence-based readiness snapshot of observable repository practices against a ten-criterion rubric inspired by The Turing Way. It carries no legal, institutional, or academic certification weight.

- **Repository reviewed:** [stjude-biohackathon/KIDS25-Team9](https://github.com/stjude-biohackathon/KIDS25-Team9)
- **Commit reviewed:** 275a38b5c3f1062564cb742a9b7daecf1130287b (branch main)
- **Review date:** 2026-09-18
- **Scope:** Public repository root, `src/` tree, git history, issues, branches, and repository metadata (README, LICENSE, `pyproject.toml`, `.github`, tests). No private data, credentials, or restricted files were accessed.
- **Confidence:** Medium-high. Findings are based on direct inspection of the repository tree and GitHub metadata (issues, branches, contents API) at the commit above; no CI logs, releases, or private discussions exist to review.

Total score: 22 / 100

#	Criterion	Score (/10)	Observed evidence
1	Project purpose and scope	4	README.md states a clear purpose (napari plugin for DL image analysis) and lists supported tasks (2D/3D U-Net, Mask R-CNN, Faster R-CNN), but there is no explicit intended-audience statement or documented known limitations beyond a one-line "Transformer networks incoming" note.
2	Version control and provenance	4	37 commits from 6 contributors with merged PRs (e.g. PR #11), but no git tags/releases, no CHANGELOG, several non-descriptive commit messages (e.g. "May the force be with us !" x3), and 20 compiled <code>__pycache__/*.pyc</code> files are tracked in git with no root-level .gitignore .
3	Open collaboration	3	GitHub Issues are enabled and actively used (4 open issues, e.g. #27 , #25) and 14 feature branches show active collaboration, but there is no CO NTRIBUTING.md or CODE_OF CONDUCT.md anywhere in the tree, and no maintainer/PR-review guidance is documented.
4	Reproducible environments	2	pyproject.toml defines build metadata and a napari entry point, but declares no <code>[project].dependencies</code> , and <code>no requirements.txt</code> , <code>environment.yml</code> , lock file, or Dockerfile exists to pin the runtime environment.
5	Data and workflow provenance	2	Model configuration files exist (<code>maskrcnn_config.json</code> , <code>src/configs/*/config.json</code>), but there is no documentation of data sources, expected data schemas/

#	Criterion	Score (/10)	Observed evidence
			formats, or workflow steps connecting annotation → training → inference.
6	Testing and validation	0	No file or directory matching a test suite (tests/, test_*.py, pytest, etc.) exists anywhere in the repository tree.
7	Automation and continuous integration	0	The repository has no .github directory; GET /repos/stjude-biohackathon/KIDS25-Team9/contents/.github returns 404 Not Found. No CI workflow of any kind runs on commits or pull requests.
8	Documentation and usability	3	README clearly lists features and supported architectures, but has no installation instructions, no usage/quickstart example, and no developer documentation; the GitHub Wiki is enabled but the repository description/topics are empty.
9	Licensing, attribution, and responsible reuse	4	An MIT LICENSE is present at the root, but there is no CITATION.cff, no third-party attribution notes, and no explicit reuse/citation guidance for downstream users.
10	Ethics, accessibility, and sustainability	0	No ethics, accessibility, or sustainability/maintenance statement exists anywhere in the repository; no archival plan (e.g. Zenodo/DOI integration) is present.

Checks performed

- Listed and read all root-level files (README.md, LICENSE, pyproject.toml, maskrcnn_config.json) and the full src/ tree.
- Searched the repository for CONTRIBUTING*, CODE_OF_CONDUCT*, CITATION.cff, *requirements*, *environment*, and test* files — none found.
- Queried the GitHub REST API for repository metadata, branches, contributors, open issues, .github contents, tags, and releases.
- Inspected git log (37 commits, 6 named contributors) and confirmed 20 tracked __pycache__/*.pyc files with no root .gitignore.
- Retrieved grounding guidance from The Turing Way's book via the learning-assistant RAG tool (turing-way dataset, relevance score 89.0) for all ten criteria before scoring.

Recommendations (pinned to Turing Way guidance)

#	Recommendation	Repository evidence	Turing Way source
1	Add automated tests (unit/integration); no test files exist anywhere in the repository, so regressions cannot be caught before merge.	No tests//test_* layout found in the repository tree .	Testing Resources

#	Recommendation	Repository evidence	Turing Way source
2	Add a CI workflow (e.g. GitHub Actions) to run tests and checks automatically on each push/PR.	No <code>.github</code> directory exists at the reviewed commit (tree); the contents API returns 404 for <code>.github</code> .	Continuous Integration
3	Declare and pin project dependencies in <code>pyproject.toml</code> and/or add an <code>environment/requirements/lock</code> file.	pyproject.toml has no <code>[project].dependencies</code> , and no <code>requirements/</code> <code>environment/lock</code> file exists.	Reproducible Environments overview
4	Add <code>CONTRIBUTING.md</code> and <code>CODE_OF_CONDUCT.md</code> to formalize open collaboration norms.	No such files exist at the repository root or elsewhere , though 4 open issues and 14 branches show active but informal collaboration.	Project Repository Participation
5	Add a <code>CITATION.cff</code> file so the software and its contributors can be formally cited and credited.	No <code>CITATION.cff</code> exists despite the MIT LICENSE being present.	Citation File Format (CFF)

Limitations

- This snapshot reflects only the single commit reviewed (275a38b5); the repository has many active feature branches not evaluated.
- No repository maintainer was consulted; internal practices (e.g. informal code review over chat, undocumented CI run elsewhere) may exist but are not observable from the public repository alone.
- Scores are evidence-gated: a criterion scores 0 only when no reliable evidence was found in the reviewed scope, not as a judgment of the team's actual practices.
- This is a readiness snapshot for improvement planning, **not** an official Turing Way, institutional, or legal certification of any kind.
